

PRACTICE 3: Procedures and macros

Objectives:

The aim of these practices is to help students in the understanding of software reuse via procedures and macros

Programs used:

Microsoft Assembler 5.1 will be used to assemble (MASM), link (LINK) and execute (CODE VIEW) assembly programs.

ACTIVIDADES PARA LA PRÁCTICA 3

Some of the next activities may have coding mistakes in order of learning how errors are shown and corrected.

| Exercise # | Exercise |
|------------|--|
| 1 | Write, assemble, link and execute next program code: |
| | dosseg |
| | .model small |
| | .stack 100h |
| | .data |
| | Texto1 DB "This program calculates powers", 13,10,'\$' |
| | Texto2 DB "Please, enter Base < 255: ", 13,10,'\$' |
| | Texto3 DB "Please, introduce Exponent < 255: ", 13,10,'\$' |
| | Base DB ? |
| | Exp DB ? |
| | Resul DW ? |
| | .code |
| | convierte proc |
| | sub al,30h |
| | ret |
| | convierte endp |
| | |
| | potencia macro LaBase, Exponente |
| | mov cx, Exponente |
| | mov av 1 |
| | inov ax, 1 |
| | JUXZ UCIO |
| | |
| | liqui Ladase |
| | |

| Exercise # | Exercise |
|------------|---|
| | cero: |
| | endm |
| | y |
| | Inicio: |
| | mov ds, @data |
| | niov us, ax |
| | mov ah.9 |
| | lea dx,Texto1 |
| | int 21h |
| | |
| | lea dx,Texto2 |
| | int 21h |
| | mov sh 1 |
| | int 21h |
| | call convierte |
| | mov Base, al |
| | |
| | mov ah,9 |
| | lea dx,Texto3 |
| | int 21h |
| | mov ah,1 |
| | int 21h |
| | call convierte |
| | mov Exp, al |
| | notencia Base, Exp |
| | mov Resul, ax |
| | |
| | mov ah, 4Ch |
| | int 21h |
| | END Inicio |
| 2 | Display Base, Exp.y. Resul variables (E.g. CODE VIEW line order |
| - | > Wb Base 1 1) Is the result correct? |
| | |
| | |
| 3 | Display stack values before and after jumping into the procedure |
| | E.g:: Code View line order > Wb SS:SP I6 What can be observed? |

PRACTICE 3 Procedures and Macros

Create an assembly program (without using string instructions) that read two strings of characters from the keyboard (maximum length 120 characters). Both strings must be compared using a macro and finally the program must display the number of different characters only. It's mandatory to distinguish between uppercase and lowercase.

E.g. If the read string were:

To be or not to be, that is the question

To BE or not to be

The program will show:

Number of different characters: 24
